

## **Anti-epidemic Bulwark Cemented in DPRK**

Pyongyang, June 10 (KCNA) -- All the sectors and units of the DPRK are voluntarily and dutifully preserving their unity in thought and action and acting in concert. Party organizations at all levels conduct information activities to make sure that officials, working people and other citizens reject indolence, relaxation, carelessness and slackness, further raise their consciousness of crisis and sense of responsibility and retain high alertness and voluntary unity.

The anti-epidemic and public health sectors are acting in concert.

Members of the rapid mobile anti-epidemic teams and rapid diagnosis and treatment teams formed at the emergency anti-epidemic units at all levels are ready for action round the clock and conducting the confirmation, transport and treatment of cases while foreseeing all possible circumstances in close touch with relevant units.

Members of the rapid collective diagnosis teams formed at central hospitals are discussing the diagnosis and treatment of the fever cases taken to local hospitals and taking correct measures via a tele-medical service system.

Scientists and educators from educational, public health and hygienic and anti-epidemic organs are surveying and analyzing the clinical experience and efficient remedies gained by public health and anti-epidemic sectors in all provinces as well as the advanced anti-epidemic achievements made in different countries in order to steadily improve the phased treatment methods.

Collective discussion and research is intensified to adopt optimal dosages and progress made in treatment.

Public health workers, teachers and students of the institutions training medical workers and hygienic workers across the country continue to wage intensive medical checkups, treatment and hygienic information activities at the areas and units concerned.

More fully displayed are the great traits of Korean-style socialism where all the people help each other, share pain and stick together to brave ordeals whenever they are in difficulties.

The anti-epidemic bulwark of the country is being further cemented. -0-
